

MISSISSIPPI CORN FOR GRAIN HYBRID TRIALS, 2022

Information Bulletin 574 • February 2023

MISSISSIPPI'S OFFICIAL VARIETY TRIALS

MISSISSIPPI STATE UNIVERSITY™
MS AGRICULTURAL AND
FORESTRY EXPERIMENT STATION

TECHNICAL ADVISORY COMMITTEE

Tom Allen
Plant Pathologist
Delta Research and Extension Center

Angus Catchot
Associate Director
Mississippi Agricultural
and Forestry Experiment Station

Scott Cummings
Industry Representative
Nutrien Ag Solutions

Darrin Dodds
Professor and Head
MSU Plant and Soil Sciences

Greg Ferguson
Industry Representative
Bayer Crop Science

Phillip Good
Producer Representative

Erick Larson
Extension/Research Professor
MSU Plant and Soil Sciences

Paul Williams (Chair)
Research Geneticist
USDA Agricultural Research Service
Crop Science Research Laboratory

Partial funding for this project was provided by the Mississippi Corn Promotion Board.

NOTE TO USER

This Mississippi Agricultural and Forestry Experiment Station Information Bulletin is a summary of research conducted at locations shown on the map on the second page. It is intended for the use of colleagues, cooperators, and sponsors. The interpretation of data presented herein may change after additional experimentation. Information included herein is not to be construed either as a recommendation for use or as an endorsement of a specific variety or product by Mississippi State University or the Mississippi Agricultural and Forestry Experiment Station.

This report contains data generated as part of the Mississippi Agricultural and Forestry Experiment Station research program. Joint sponsorship by the organizations listed on pages 4-5 is gratefully acknowledged.

Trade names of commercial products used in this report are included only for clarity and understanding. All available names (i.e., trade names, code numbers, chemical names, etc.) of varieties or products used in this research project are listed on pages 4-5.

Mississippi Corn for Grain Hybrid Trials, 2022

PROCEDURES

Trials were conducted on Experiment Station land or on grower-cooperator fields in two geographical areas in Mississippi: Area I, located in the hill region of Mississippi (one irrigated and four dryland locations); and Area II, located in the Delta region of Mississippi (three irrigated locations) (see map). Commercial seed companies were given the opportunity to enter hybrids in either Area I or Area II or both.

Plots consisted of two 30-inch rows, 15 feet long. Weeds were controlled by cultivation and/or herbicides. Only herbicides currently registered for use on corn were used in these studies, with strict adherence to all label instructions.

All hybrids were treated with Poncho or Cruiser for seedling insect control. Experimental design was a randomized complete block with four replications at each location.

Seed of all entries were supplied by participating companies. All seed were packaged for planting at seeding rates suggested by the participating company and planted with a precision vacuum planter. Fertilizer was applied according to soil test recommendations. Plots in Area I were grown under both dryland and irrigated conditions, and plots in Area II were grown under irrigated conditions. All irrigated trials were either furrow or center-pivot irrigated, as necessary.

VARIABLES MEASURED IN THE CORN HYBRID TESTS

Yield: An Almaco SPC 40 plot combine was used to harvest the total area of each plot. Harvested grain was weighed, moisture was determined, and yields were converted to bushels per acre at 14% moisture.

Ear Height: Ear height is the distance from the soil to the highest ear-bearing node.

Harvest Population: Harvest population is a measure of the number of plants per acre, based on actual stand counts.

USE OF DATA TABLES AND SUMMARY STATISTICS

The yield potential of a given hybrid cannot be measured with complete accuracy. Consequently, replicate plots of all hybrids are evaluated for yield, and the yield of a given hybrid is estimated as the mean of all replicate plots of that hybrid. Yields vary somewhat from one replicate plot to another, which introduces a certain degree of error to the value. As a result, although the mean yields of some hybrids are numerically different, the two hybrids may not be significantly different from each other within the range of natural variation. That is, the ability to measure yield is not precise enough to determine what the small differences are, other than what might be observed purely by chance.

The least significant difference (LSD) is an estimate of the smallest difference between two hybrids that can be

declared to be the result of something other than random variation in a particular trial. Consider the following example for a given trial:

Hybrid	Yield
A	90 bu/A
B	85 bu/A
C	81 bu/A
LSD	7 bu/A

The difference between hybrid A and hybrid B is 5 bu/A (i.e., $90 - 85 = 5$). This difference is smaller than the LSD (7 bu/A). Consequently, we would conclude that hybrid A and hybrid B have the same yield potential, since we are unable to say that the observed difference did not occur purely due to chance. However, the differ-

ence between hybrid A and hybrid C is 9 bu/A (i.e., 90 - 81 = 9), which is larger than the LSD (7 bu/A). We would therefore conclude that the yield potential of hybrid A is superior to that of hybrid C.

The coefficient of variation (CV) is a measure of the relative precision of a given trial and is used to compare the relative precision of different trials. The CV is generally considered an estimate of the amount of unexplained variation in a given trial. This unexplained variation can be the result of variation between plots with respect to soil type, fertility, insects, diseases, moisture stress, etc. Overall, as the CV increases, the precision of a given trial decreases.

The coefficient of determination (R^2) is another measure of the level of precision in a trial and is also used to compare the relative precision of different trials. The R^2 is a measure of the amount of variation that is explained, or accounted for, in a given trial. For example, an R^2 value of 90 percent indicates that 90 percent of the observed variation in the trial has been accounted for in the trial, with the remaining 10 percent being unaccounted for. The higher the R^2 value, the more precise the trial. The R^2 is generally considered a better measure of precision than the CV for comparison of different trials.

Table 1. 2022 corn hybrid trials location summary.

Location	Soil type	Irrigation	Planting date	Harvest date	Row spacing
Aberdeen, Chris Ausborn Farm	Houston clay	Not Irrigated	4/26	9/10	30"
Brooksville, Black Belt Station	Brooksville silty clay	Not Irrigated	3/28	8/16	30"
Crystal Springs, Truck Crops Branch Station	Providence silt loam	Not Irrigated	3/28	9/6	30"
Lake Cormorant, Hurricane Farms	Dundee very fine sandy loam	Irrigated	5/18	10/3	30"
Macon, Dorsey Unruh Farm	Brooksville and Vaiden silty clay	Irrigated	4/25	9/1	30"
Minter City, Adron Farms	Dundee loam & Tensas silty clay loam	Irrigated	4/8	9/1	30"
Rolling Fork, Todd Heigle Farm	Commerce silty clay loam	Irrigated	3/29	8/31	30"
Stoneville (clay), Delta Branch Station	Commerce silty clay loam	Irrigated	3/29	9/2	30"
Stoneville (loam), Delta Branch Station	Bosket very fine sandy loam	Irrigated	3/29	8/19	30"
Stoneville (loam), Delta Branch Station	Bosket very fine sandy loam	Not Irrigated	3/29	8/19	30"
Verona, Northeast MS Branch Station	Leeper silty clay loam	Not Irrigated	4/4	8/18	30"

CHRIS AUSBORN FARM, ABERDEEN

Crop Summary

The corn plots were planted in late April into a stale seedbed that had good soil moisture. All plots quickly emerged to a good stand. Rainfall was below average for the growing season, and temperatures were high. Timely

rains did supply adequate soil moisture to allow for respectable yields, but yields were below average at this location. Harvest was completed in a timely manner without difficulties.

Soil typeHouston clay

Soil pH6.5

Soil fertilityP=M, K=M

FertilizerPreplant – 0-20-20 applied variable rate

At planting – 10-20-1S-0.43Zn @ 15 gal/A (applied 2x2) on April 26

Sidedress – 28-0-0-5 @ 200 units

HerbicideBurndown – Roundup @ 1 qt/A and 2,4-D @ 1 pt/A

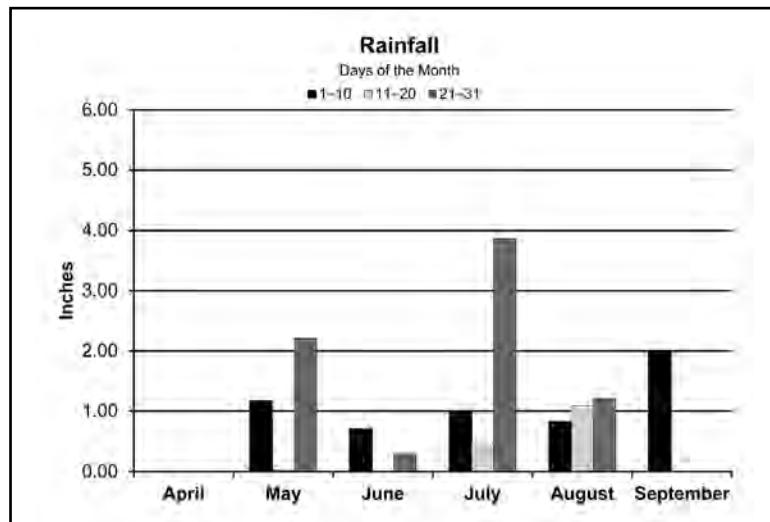

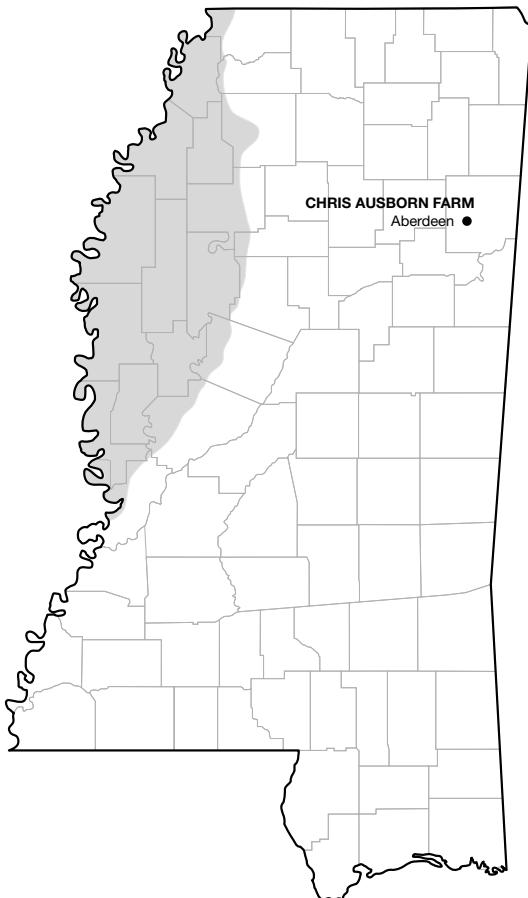

Preemergence – Gramoxone @ 1 qt/A and Corvus @ 5 oz/A on April 26

Postemergence – Atrazine @ 1 qt/A and Halex GT @ 2 qt/A

MAFES BLACK BELT BRANCH, BROOKSVILLE

Crop Summary

The corn plots were planted into a stale seedbed that had been prepared the previous fall. There was good soil moisture at planting for germination, and all plots quickly emerged to a good stand. Rainfall was well below average for growing season. That, in combination with

high summertime temperatures, had a significant impact on the plots yield potential. Harvest was completed in a timely manner. Below-average yields were recorded at this location.

Soil type Brooksville silty clay

Soil pH 6.2

Soil fertility P=L, K=L

Fertilizer Preplant — 0-26-26 @ 500 lb/A

At planting — 10-20-5-1S-0.43Zn @ 15 gal/A (applied 2x2) and 13-13-13 @ 150 lb/A
on March 28

Topdress — N @ 205 lb/A (33-0-0-12S) on May 17

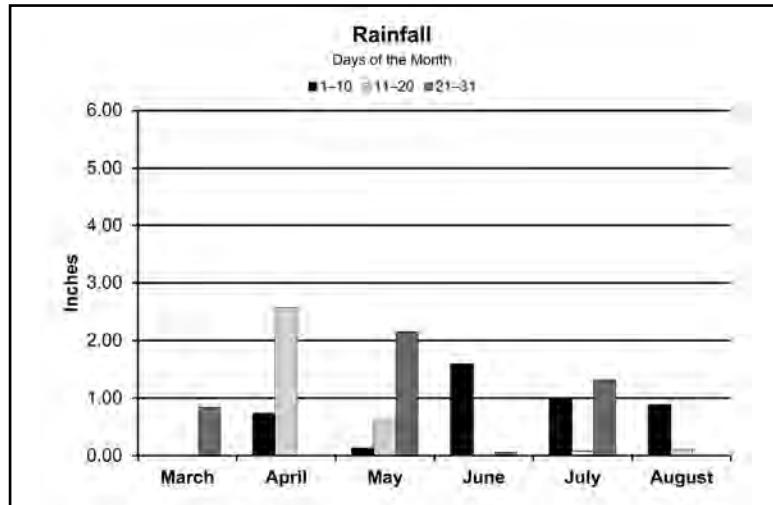

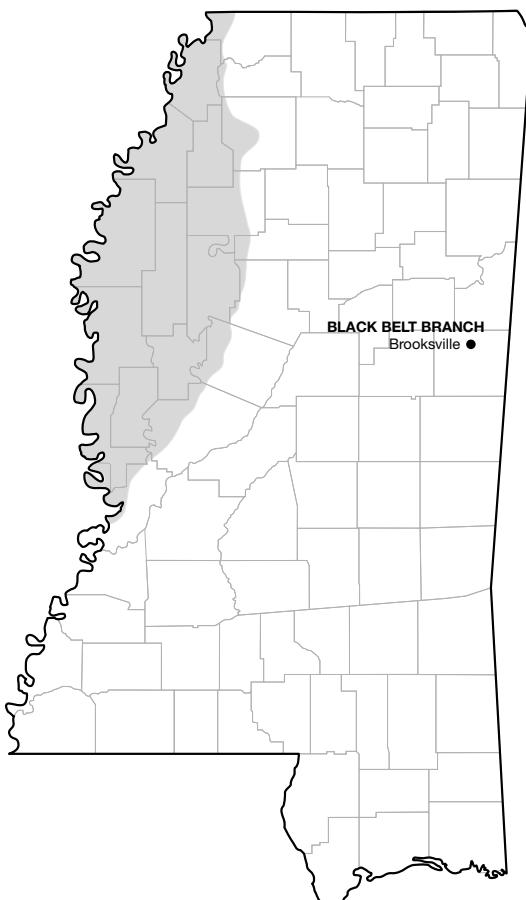

Herbicide Preemergence — Gramoxone @ 1 qt/A and Corvus @ 5 oz/A on March 28

Postemergence — Roundup PowerMax @ 32 oz/A and Acuron @ 2 qt/A on May 17

TRUCK CROPS BRANCH, CRYSTAL SPRINGS

Crop Summary

The corn plots were planted flat into a stale seedbed of the previous year's soybean crop. There was good soil moisture at planting for germination, and all plots quickly emerged to a stand. Abundant rainfall during

crucial points of the growing season allowed for very good dryland yields at this location. Harvest was delayed slightly due to rainfall, but it was still completed within a timely manner.

Soil type Providence silt loam

Soil pH 6.3

Soil fertility P=M, K=M

Fertilizer At planting – 10-20-5-1S-0.43Zn @ 15 gal/A (applied 2x2) on March 28

Topdress – N @ 75 lb/A (33-0-0-12S) on May 16 and N @ 80 lb/A (46-0-0) on June 17

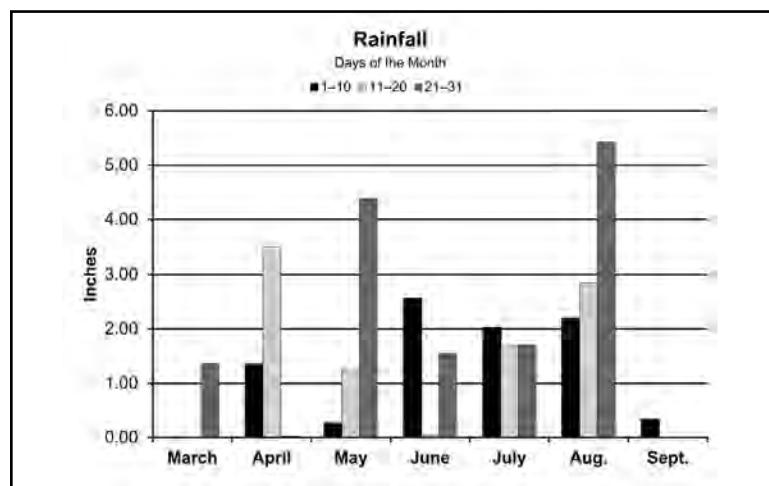

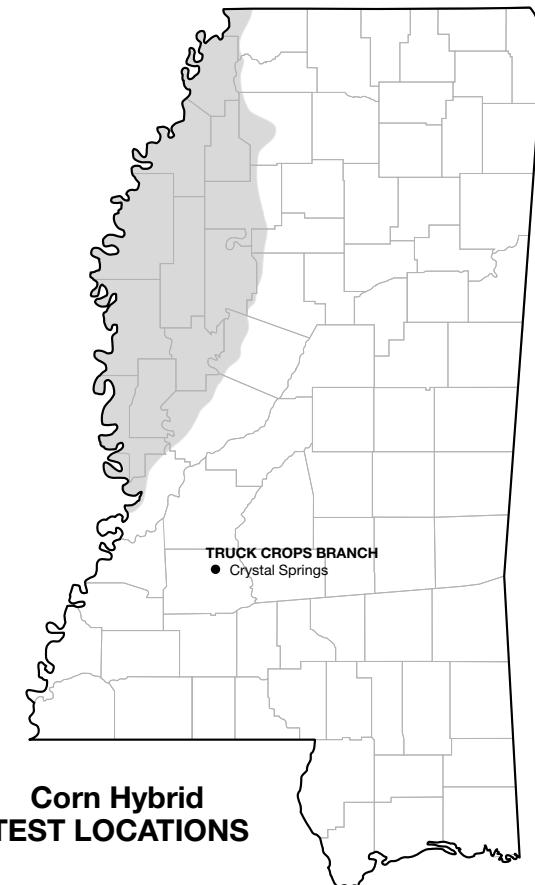

Herbicide Preemergence – Gramoxone @ 1 qt/A and Corvus @ 5 oz/A on March 28

Postemergence – Halex GT @ 3.2 pt/A and Atrazine @ 1 qt/A on April 27

Previous crop Soybean

HURRICANE FARMS, LAKE CORMORANT

Crop Summary

The corn plots were planted mid-May into a stale seedbed, hopped well before planting. Following planting, a preemergence herbicide application was made. Soil moisture was adequate at planting, and all plots quickly emerged to a good stand. Timely rainfall and

furrow irrigation during the growing season supplied good soil moisture throughout. Harvest was made in a timely manner and yields were respectable considering the late planting date and the high temperatures during the summer.

Soil typeDundee very fine sandy loam

Soil pH6.0

Soil fertilityP=H, K=H

FertilizerPreplant — DAP @ 200 lb/A and MOP @ 100 lb/A

DORSEY UNRUH FARM, MACON

Crop Summary

The plots were planted in late April into a stale seedbed that was prepared the previous fall. Good soil moisture was present at the time of planting, and all plots quickly emerged to a good stand. The growing season was plagued with high temperatures and

below-average rainfall. Timely irrigation, in combination with rainfall, allowed for good soil moisture throughout the growing season. Harvest was completed in a timely manner, and good yields were observed at this location.

Soil type Brooksville and Vaiden silty clay

Soil pH..... 6.5

Soil fertility P=H, K=H

ADRON FARMS, MINTER CITY

Crop Summary

The corn plots were planted in early April. Soil moisture was adequate at planting, and all plots quickly emerged to a good stand. Timely rainfall, in combination with furrow

irrigation, supplied ample soil moisture throughout the growing season. Harvest was completed in a timely manner, and good yields were recorded at this location.

Soil typeDundee loam and Tensas silty clay

Soil pH6.4

Soil fertilityP=H, K=H

TODD HEIGLE FARM, ROLLING FORK (IRRIGATED)

Crop Summary

The plots were planted flat in late March into a stale seedbed with good soil moisture. All plots quickly emerged to a good stand. Timely rainfall, in combination with irrigation, allowed for ample soil moisture

throughout the growing season for the crop. Harvest was completed in a timely manner without difficulties, and good yields were observed at this location.

Soil typeCommerce silty clay loam

Soil pH6.2

Soil fertilityP=H, K=H

MAFES DELTA BRANCH, STONEVILLE (CLAY)

Crop Summary

The plots were planted in late March into a stale seedbed with good soil moisture. The corn was planted flat because the weather never allowed for a window to prepare raised seedbeds. Favorable weather allowed for a

March planting window. All plots quickly emerged to a good stand. Rainfall and timely irrigation supplied soil moisture throughout the season. Harvest was completed in a timely manner. Good yields were observed.

Soil type Sharkey clay

Soil pH 6.6

Soil fertility P=H, K=H

Fertilizer At planting — 10-20-5-1S-0.43Zn @ 15 gal/A (applied 2x2) on March 29

Sidedress — 32 % UAN @ 120 units on April 24; 32% UAN @ 120 units on May 5

Herbicide Preemergence — Gramoxone @ 1 qt/A, Atrazine @ 2 qt/A, and Corvus @ 5 oz/A on March 29

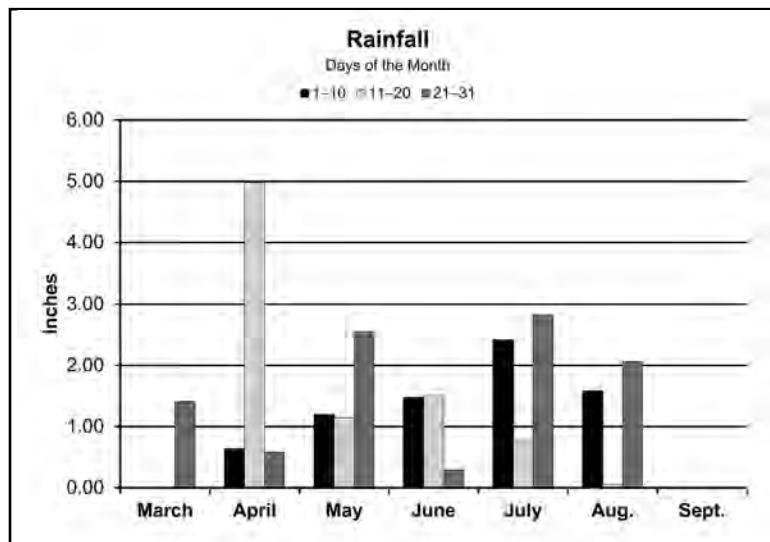

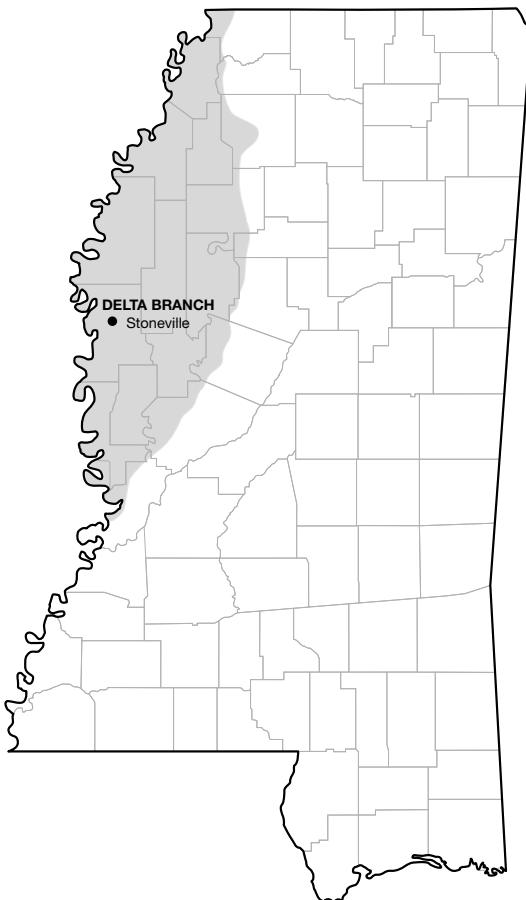

Postemergence — Roundup PowerMax @ 24 oz/A and Acuron @ 2 qt/A on May 20

MAFES DELTA BRANCH, STONEVILLE (LOAM) IRRIGATED

Crop Summary

The plots were planted in late March into a seedbed with good soil moisture. The beds were rolled flat just prior to planting. All plots emerged to a good stand.

Timely rainfall, in combination with furrow irrigation, supplied soil moisture throughout the season. Harvest was completed in a timely manner.

Soil typeBosket very fine sandy loam

Soil pH.....6.0

Soil fertilityP=H, K=H

FertilizerAt planting — 10-20-5-1S-0.43Zn @ 15 gal/A (applied 2x2) on March 29

Preplant — 21-0-0-24S @ 100 lb/A

Sidedress — 32% UAN @ 120 units on April 22; 32% UAN @ 120 units on May 4

HerbicidePreemergence — Gramoxone @ 32 oz/A, Atrazine @ 32 oz/A, and Corvus @ 5 oz/A on March 29

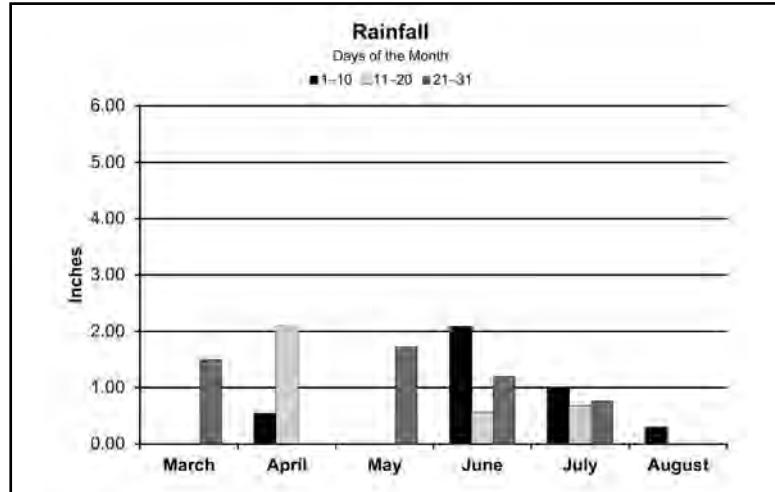

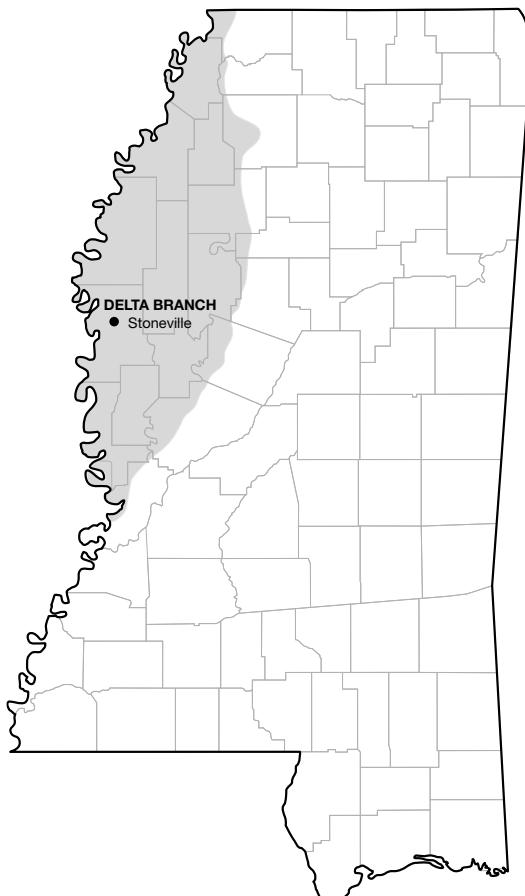

Postemergence — Roundup PowerMax @ 24 oz/A and Acuron @ 2 qt/A on May 20

DELTA BRANCH, STONEVILLE (LOAM) NONIRRIGATED

Crop Summary

The plots were planted in late March into a seedbed with good soil moisture. The beds were rolled flat just prior to planting. All plots emerged to a good stand. The

growing season was hot and dry. Well-below-average rainfall was recorded during the growing season. Harvest was completed in a timely manner.

Soil typeBosket very fine sandy loam

Soil pH6.0

Soil fertilityP=H, K=H

FertilizerAt planting — 10-20-5-1S-0.43Zn @ 15 gal/A (applied 2x2) on March 29

Preplant — 21-0-0-24S @ 100 lb/A

Sidedress — 32% UAN @ 120 units on April 22; 32% UAN @ 120 units on May 4

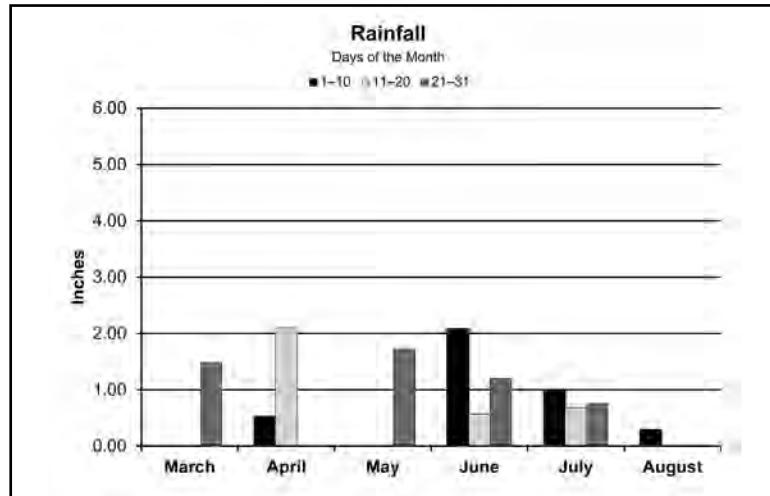

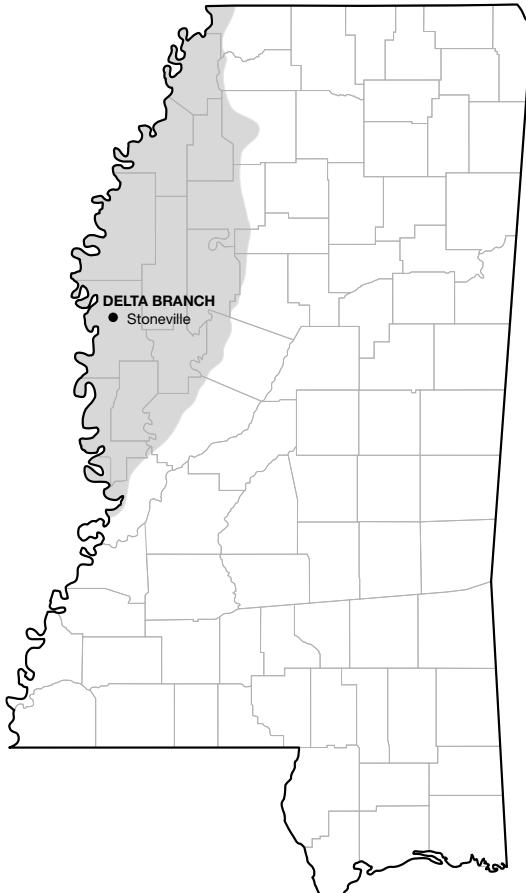

HerbicidePreemergence — Gramoxone @ 32 oz/A, Atrazine @ 32 oz/A, and Corvus @ 5 oz/A on March 29

Postemergence — Roundup PowerMax @ 24 oz/A and Acuron @ 2 qt/A on May 20

MAFES NORTHEAST MISSISSIPPI BRANCH, VERONA

Crop Summary

The corn plots were planted on April 4 into a stale seedbed that had good soil moisture. All plots quickly emerged to a good stand. Rainfall was limited during the

growing season. High temperatures and below-average rainfall were also recorded during the growing season. Harvest was completed in a timely manner without difficulty.

Soil typeLeeper silty clay

Soil pH6.1

Soil fertilityP=M, K=M

FertilizerAt planting — 10-20-5-1S-0.43Zn @ 15 gal/A (applied 2x2) on April 4

MS AGRICULTURAL AND
FORESTRY EXPERIMENT STATION

The mission of the Mississippi Agricultural and Forestry Experiment Station and the College of Agriculture and Life Sciences is to advance agriculture and natural resources through teaching and learning, research and discovery, service and engagement which will enhance economic prosperity and environmental stewardship, to build stronger communities and improve the health and well-being of families, and to serve people of the state, the region and the world.

Scott Willard, Director
